

ENGINEERING OF SUCCESS

INŻYNIERIA SUKCESU

Competition was created 4 years ago by ambitious members of the "Gambrinus" Scientific Circle at the Wrocław University of Technology. The competition aims to select people who are not only characterized by above-average knowledge in the field of theoretical issues, but also are able to locate problems that appear, among others, in factories or industrial installations, and then apply creative solutions.

This competition is multi-stage. The first stage takes place at home universities, where students complete the test of closed tasks. The finale is divided into several parts. The first is a test consisting of closed and open tasks, covering theoretical issues, the next is the use of computer programs to perform a design task, and the last one is the laboratory part.

It all ends with cruise on the Odra River and integrations of finalists.

For all finalists, prizes and starter packs are provided, while the three winners will receive prizes with a total value of over PLN 3,000.

You can sign it by filling the form until March 28th.
